AMENDMENTS TO THE SPECIFICATION

Please amend the Title as follows:

4128091054

SILICA-FILLED ELASTOMERIC COMPOUNDS AND METHODS FOR PREPARING SAME

Please amend the Abstract as follows:

The invention provides a process for preparing a filled halobutyl elastomer, which includes mixing a halobutyl elastomer with at least one mineral filler that has been reacted with at least one organic compound containing at least one basic nitrogen-containing group and at least one hydroxyl group and, optionally, with at least one silazane compound before admixing the filler with the halobutyl elastomer and optionally curing the filled elastomer with sulfur or other curative systems. This invention has the advantages of (a) not evolving alsohol either during the manufacture or subsequent use of the article manufactured from the compound, (b) improving the scorch safety of filled halobutyl clastomer compounds which employ silled as the mineral filler and a hydroxyl- and amine-containing additive as a dispersing aid and (c) significantly reducing the cost of the compound compared to analogous compounds currently known in the art.
